

Assumption School Weather Station

Assumption School recently commissioned its very own weather station, **KMAMILLB8**. Our school's weather station is registered with the Weather Underground cloud services so current and historical weather conditions are continuously updated and posted to the Weather Underground. Checkout our Assumption School's weather website at:

<https://www.wunderground.com/personal-weather-station/dashboard?ID=KMAMILLB8>

The school's weather website dashboard shows the school's location, current and past conditions. The example shown was from Monday, January 21st, the temperature was 1.2 °F with winds gusting over 40 MPH. The wind chill was at many times well below -20 °F. A mobile app is also available so you can get the school's weather conditions at any time anywhere.

The weather station was launched as a community initiative so our students can learn how STEM disciplines enable environmental awareness. To learn more, visit our middle school STEM display

on the 2nd floor to view current weather conditions on the local Display Console and learn about the station's components, functions and how STEM disciplines make it all possible.
