

Technology & Library Media Center

The library is here to help students become critical thinkers and skillful, responsible users of information. Our librarian collaborates with teachers and administrators to plan, implement, and evaluate instruction.

Our library boasts over 16,000 books and print materials and utilizes new technologies that support the curriculum, classroom learning, and research.

Additionally, the library encourages and promotes avid reading for students.

In Computer Class, students learn how the different parts of the computer work together, and how to use different types of applications and programs on the computer. In class, we work hard and try to have fun along the way.

The computer lab has 25 stations for students to work at. In addition to the computer lab, we have a satellite lab set up in the Library for use as a technology resource center for student research and learning.

GSCS implements a 1:1 iPad program for students in grades 5-8.
